# Introduction

This book links high school coordinate geometry to linear algebra and matrix analysis through solved problems.

# Chapter 1

# Vectors

## 1.1. Motion in a Plane

1.1.1 On an open ground, a motorist follows a track that turns to his left by an angle of 60° after every 500m. Starting from a given turn, specify the displacement of the motorist at the third, sixth and eighth turn. Compare the magnitude of the displacement with the total path length covered by the motorist in each case.

1.1.2 Rain is falling vertically with a speed of 30 $ms^{-1}$. A woman rides a bicycle with a speed of 10 $ms^{-1}$ in the north to south direction. What is the direction in which she should hold her umbrella.

1.1.3 A man can swim with a speed of 4 km/h in still water. How long does he take to cross a river 1 km wide if the river flows steadily at 3 km/h and he makes strokes normal to the river current.
