

Assignment 1

Jaswanth Chowdary Madala

- 1) Find the equation of the ellipse that satisfies the conditions - Centre at $(0, 0)$, major axis on the y-axis and passes through the points $(3, 2)$ and $(1, 6)$.

Solution: The equation of the conic with focus \mathbf{F} , directrix $\mathbf{n}^\top \mathbf{x} = c$ and eccentricity e is given by

$$\mathbf{x}^\top \mathbf{V} \mathbf{x} + 2\mathbf{u}^\top \mathbf{x} + f = 0 \quad (0.0.1)$$

where

$$\mathbf{V} \triangleq \|\mathbf{n}\|^2 \mathbf{I} - e^2 \mathbf{n} \mathbf{n}^\top \quad (0.0.2)$$

$$\mathbf{u} \triangleq c e^2 \mathbf{n} - \|\mathbf{n}\|^2 \mathbf{F} \quad (0.0.3)$$

$$f \triangleq \|\mathbf{n}\|^2 \|\mathbf{F}\|^2 - c^2 e^2 \quad (0.0.4)$$

Given that the conic is an ellipse with major axis along the y-axis, we get

$$\mathbf{n} = \begin{pmatrix} 0 \\ 1 \end{pmatrix} \quad (0.0.5)$$

Thus,

$$\mathbf{V} = \begin{pmatrix} 1 & 0 \\ 0 & 1 - e^2 \end{pmatrix} \quad (0.0.6)$$

$$\mathbf{u} = c e^2 \begin{pmatrix} 0 \\ 1 \end{pmatrix} - \mathbf{F} \quad (0.0.7)$$

$$f = \|\mathbf{F}\|^2 - c^2 e^2 \quad (0.0.8)$$

The centre of the conic is given by

$$\mathbf{c} = -\mathbf{V}^{-1} \mathbf{u} \quad (0.0.9)$$

Since $\mathbf{c} = \mathbf{0}$ and $\mathbf{V}^{-1} \neq \mathbf{0}$, it follows from (0.0.9) that

$$\mathbf{u} = \mathbf{0} \quad (0.0.10)$$

Thus, from (0.0.7),

$$\mathbf{F} = \begin{pmatrix} 0 \\ c e^2 \end{pmatrix} \quad (0.0.11)$$

and so,

$$f = c^2 e^2 (e^2 - 1) \quad (0.0.12)$$

Given that the conic passes through point,

$$\mathbf{P} = \begin{pmatrix} 3 \\ 2 \end{pmatrix} \quad (0.0.13)$$

Putting $\mathbf{x} = \mathbf{P}$ in (0.0.1) we get,

$$\begin{pmatrix} 3 & 2 \end{pmatrix} \begin{pmatrix} 1 & 0 \\ 0 & 1 - e^2 \end{pmatrix} \begin{pmatrix} 3 \\ 2 \end{pmatrix} + f = 0 \quad (0.0.14)$$

$$\implies 4e^2 - f = 13 \quad (0.0.15)$$

Given that the conic passes through point,

$$\mathbf{Q} = \begin{pmatrix} 1 \\ 6 \end{pmatrix} \quad (0.0.16)$$

Putting $\mathbf{x} = \mathbf{Q}$ in (0.0.1), we get

$$\begin{pmatrix} 1 & 6 \end{pmatrix} \begin{pmatrix} 1 & 0 \\ 0 & 1 - e^2 \end{pmatrix} \begin{pmatrix} 1 \\ 6 \end{pmatrix} + f = 0 \quad (0.0.17)$$

$$\implies 36e^2 - f = 37 \quad (0.0.18)$$

The equations (0.0.15) and (0.0.18) can be formulated as the following matrix equation

$$\begin{pmatrix} 4 & -1 \\ 36 & -1 \end{pmatrix} \begin{pmatrix} e^2 \\ f \end{pmatrix} = \begin{pmatrix} 13 \\ 37 \end{pmatrix} \quad (0.0.19)$$

The augmented matrix is given by,

$$\left(\begin{array}{cc|c} 4 & -1 & 13 \\ 36 & -1 & 37 \end{array} \right) \quad (0.0.20)$$

$$\xleftrightarrow{R_1 \leftarrow R_1 - R_2} \left(\begin{array}{cc|c} -32 & 0 & -24 \\ 36 & -1 & 37 \end{array} \right) \quad (0.0.21)$$

$$\xleftrightarrow{R_1 \leftarrow -\frac{R_1}{8}} \left(\begin{array}{cc|c} 4 & 0 & 3 \\ 36 & -1 & 37 \end{array} \right) \quad (0.0.22)$$

$$\xleftrightarrow{R_2 \leftarrow R_2 - 9R_1} \left(\begin{array}{cc|c} 4 & 0 & 3 \\ 0 & -1 & 10 \end{array} \right) \quad (0.0.23)$$

$$\xleftrightarrow{\begin{array}{l} R_1 \leftarrow \frac{R_1}{4} \\ R_2 \leftarrow -R_2 \end{array}} \left(\begin{array}{cc|c} 1 & 0 & \frac{3}{4} \\ 0 & 1 & -10 \end{array} \right) \quad (0.0.24)$$

Thus,

$$e^2 = \frac{3}{4}, \quad f = -10 \quad (0.0.25)$$

The equation of the conic is given by

$$\mathbf{x}^\top \begin{pmatrix} 1 & 0 \\ 0 & \frac{1}{4} \end{pmatrix} \mathbf{x} - 10 = 0 \quad (0.0.26)$$

Fig. 1: Graph

Parameter	Description	Value
C	center of the ellipse	$\begin{pmatrix} 0 \\ 0 \end{pmatrix}$
m	Direction vector of major axis	$\begin{pmatrix} 0 \\ 1 \end{pmatrix}$
P	Point on the ellipse	$\begin{pmatrix} 3 \\ 2 \end{pmatrix}$
Q	Point on the ellipse	$\begin{pmatrix} 1 \\ 6 \end{pmatrix}$
