

Vectors

12th Maths - Exercise 10.2.1

1. Compute the magnitude of the following vectors

$$\vec{a} = \hat{i} + \hat{j} + \hat{k}, \vec{b} = 2\hat{i} - 7\hat{j} + 3\hat{k} \text{ and } \vec{c} = \frac{1}{\sqrt{3}}\hat{i} + \frac{1}{\sqrt{3}}\hat{j} - \frac{1}{\sqrt{3}}\hat{k}.$$

Solution:

$$\text{Let } \mathbf{a} = \begin{pmatrix} 1 \\ 1 \\ 1 \end{pmatrix}, \mathbf{b} = \begin{pmatrix} 2 \\ -7 \\ 3 \end{pmatrix}, \mathbf{c} = \begin{pmatrix} \frac{1}{\sqrt{3}} \\ \frac{1}{\sqrt{3}} \\ -\frac{1}{\sqrt{3}} \end{pmatrix} \quad (1)$$

The magnitudes of $\mathbf{a}, \mathbf{b}, \mathbf{c}$ are $\|\mathbf{a}\|, \|\mathbf{b}\|, \|\mathbf{c}\|$ respectively so

$$\|\mathbf{a}\| = \mathbf{a}^\top \mathbf{a}, \quad (2)$$

$$\|\mathbf{b}\| = \mathbf{b}^\top \mathbf{b}, \quad (3)$$

$$\|\mathbf{c}\| = \mathbf{c}^\top \mathbf{c} \quad (4)$$

now substituting values of (1) in (2),(3) and (4) respectively we get

the magnitudes of $\|\mathbf{a}\| = \sqrt{3}, \|\mathbf{b}\| = \sqrt{62}, \|\mathbf{c}\| = 1$
