Assignment 1

Jaswanth Chowdary Madala

If a line intersects two concentric circles (circles with the same centre) with centre O at A,
 B, C and D, prove that AB = CD.

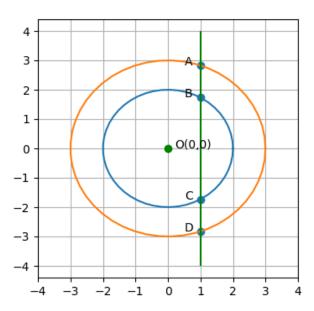

Fig. 1: Graph

Solution: Let the equations of two concentric circles be,

$$\|\mathbf{x}\|^2 = 4 \tag{0.0.1}$$

$$\|\mathbf{x}\|^2 = 9 \tag{0.0.2}$$

The parameter μ of the points of intersection of line (0.0.3) with the conic section (0.0.4)

$$\mathbf{x} = \mathbf{h} + \mu \mathbf{m} \tag{0.0.3}$$

$$g(\mathbf{x}) = \mathbf{x}^{\mathsf{T}} \mathbf{V} \mathbf{x} + 2 \mathbf{u}^{\mathsf{T}} \mathbf{x} + f = 0 \tag{0.0.4}$$

is given by the equation

$$\mu^{2}\mathbf{m}^{\mathsf{T}}\mathbf{V}\mathbf{m} + 2\mu\mathbf{m}^{\mathsf{T}}(\mathbf{V}\mathbf{h} + \mathbf{u}) + g(\mathbf{h}) = 0$$
(0.0.5)

For the line to intersect the conic at 2 points, the discriminant of the quadratic equation

(0.0.9) should be greater than 0.

$$\Delta > 0$$
 (0.0.6)

$$(\mathbf{m}^{\mathsf{T}}(\mathbf{V}\mathbf{h} + \mathbf{u}))^2 - g(\mathbf{h})(\mathbf{m}^{\mathsf{T}}\mathbf{V}\mathbf{m}) > 0 \quad (0.0.7)$$

Because the circles are concentric, if the line intersects the smaller circle then, we can say that the line satisfies the given conditions.

$$V = I, u = O, f = -4$$
 (0.0.8)

Consider

$$\mathbf{h} = \begin{pmatrix} 1 \\ 0 \end{pmatrix}, \ \mathbf{m} = \begin{pmatrix} 0 \\ 1 \end{pmatrix} \tag{0.0.9}$$

$$\mathbf{m}^{\mathsf{T}}\mathbf{V}\mathbf{m} = 1 \tag{0.0.10}$$

$$\mathbf{m}^{\mathsf{T}} \left(\mathbf{V} \mathbf{h} + \mathbf{u} \right) = 0 \tag{0.0.11}$$

$$g\left(\mathbf{h}\right) = -3\tag{0.0.12}$$

$$\Delta = 0^2 - 4(1)(-3) \qquad (0.0.13)$$

$$\Delta > 0 \tag{0.0.14}$$

The points of intersection of circle (0.0.1) and the line (0.0.3) with parameters given by (0.0.9) **B**, **C** are given by,

$$\mu^2 - 3 = 0 \tag{0.0.15}$$

$$\mu = \pm \sqrt{3} \tag{0.0.16}$$

$$\mathbf{B} = \begin{pmatrix} 1 \\ \sqrt{3} \end{pmatrix}, \ \mathbf{C} = \begin{pmatrix} 1 \\ -\sqrt{3} \end{pmatrix} \tag{0.0.17}$$

The points of intersection of circle (0.0.2) and the line (0.0.3) with parameters given by (0.0.9) **A**, **D** are given by,

$$V = I, u = O, f = -9$$
 (0.0.18)

$$\mathbf{h} = \begin{pmatrix} 1 \\ 0 \end{pmatrix}, \ \mathbf{m} = \begin{pmatrix} 0 \\ 1 \end{pmatrix} \tag{0.0.19}$$

$$\mathbf{m}^{\mathsf{T}}\mathbf{V}\mathbf{m} = 1 \tag{0.0.20}$$

$$\mathbf{m}^{\mathsf{T}} \left(\mathbf{V} \mathbf{h} + \mathbf{u} \right) = 0 \tag{0.0.21}$$

$$g(\mathbf{h}) = -8 \tag{0.0.22}$$

$$\mu^2 - 8 = 0 \tag{0.0.23}$$

$$\mu = \pm 2\sqrt{2} \qquad (0.0.24)$$

$$\mathbf{A} = \begin{pmatrix} 1 \\ 2\sqrt{2} \end{pmatrix}, \ \mathbf{D} = \begin{pmatrix} 1 \\ -2\sqrt{2} \end{pmatrix} \qquad (0.0.25)$$

$$\|\mathbf{A} - \mathbf{B}\| = \left\| \begin{pmatrix} 0 \\ 2\sqrt{2} - \sqrt{3} \end{pmatrix} \right\| \qquad (0.0.26)$$

$$= 2\sqrt{2} - \sqrt{3} \qquad (0.0.27)$$

$$\|\mathbf{C} - \mathbf{D}\| = \left\| \begin{pmatrix} 0 \\ 2\sqrt{2} - \sqrt{3} \end{pmatrix} \right\| \qquad (0.0.28)$$

$$= 2\sqrt{2} - \sqrt{3} \qquad (0.0.29)$$

Hence AB = CD. The parameters used in the construction are shown in the below table 1

Parameter	Description	Value
О	center of both circles	$\begin{pmatrix} 0 \\ 0 \end{pmatrix}$
r_1	radius of smaller circle	2
r_2	radius of larger circle	3
h	point on the line	$\begin{pmatrix} 1 \\ 0 \end{pmatrix}$
m	direction vector of the line	$\begin{pmatrix} 0 \\ 1 \end{pmatrix}$
