# Assignment - Vector-4

# Surajit Sarkar

## I. PROBLEM

Determine the ratio in which the line 2x+y-4=0 divides the line segment joining the points A(2,-2) and B(3,7).

#### II. SOLUTION

| Symbol | Value                                   |
|--------|---|
| A      | $\begin{pmatrix} 2 \\ -2 \end{pmatrix}$ |
| В      | $\begin{pmatrix} 3 \\ 7 \end{pmatrix}$  |
| С      | 4                                       |
| n      | $\begin{pmatrix} 2 \\ 1 \end{pmatrix}$  |

TABLE I: Parameters

Given equation

$$\begin{pmatrix} 2 & 1 \end{pmatrix} \mathbf{x} = 4 \tag{1}$$

Using section formula

Let the ratio be k:1 (3)

$$\mathbf{n}^{\top}\mathbf{P} = c \tag{4}$$

(2)

$$\implies \mathbf{n}^{\top} \left( \frac{k\mathbf{B} + \mathbf{A}}{k+1} \right) = c$$
 (5)

$$\implies \mathbf{n}^{\top} (k\mathbf{B} + \mathbf{A}) = c(k+1)$$
 (6)

$$\implies \mathbf{n}^{\top} k \mathbf{B} + \mathbf{n}^{\top} \mathbf{A} = c \left( k + 1 \right) \tag{7}$$

$$\implies k\mathbf{n}^{\mathsf{T}}\mathbf{B} + \mathbf{n}^{\mathsf{T}}\mathbf{A} = c(k+1)$$
 (8)

$$\implies k\mathbf{n}^{\mathsf{T}}\mathbf{B} - ck = -\mathbf{n}^{\mathsf{T}}\mathbf{A} + c \qquad (9)$$

$$\implies k \left( \mathbf{n}^{\top} \mathbf{B} - c \right) = c - \mathbf{n}^{\top} \mathbf{A} \qquad (10)$$

$$\implies k = \frac{c - \mathbf{n}^{\mathsf{T}} \mathbf{A}}{\mathbf{n}^{\mathsf{T}} \mathbf{B} - c} \tag{11}$$

$$\implies k = \frac{4-2}{13-4} \tag{12}$$

$$\implies k = \frac{2}{9} \tag{13}$$
